REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The prior art fails to teach or fairly suggest a knock detection device that detects cylinder pressure in an internal combustion engine, computes a threshold value based on cylinder pressures for a plurality of cycles, and determined the occurrence of knock based on the threshold value, wherein the device further comprises a means for determining heavy knock in a given cycle based on the maximum cylinder pressure and the maximum cylinder pressure fluctuation detected in the cycle.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

- 2. Claims 1-10 are allowed.
- 3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yamamoto et al. disclose a knock detection device in Fig. 16(B) that detects cylinder pressure P in an internal combustion engine and determines the occurrence of knock based on a predetermined threshold value P_{h2}, wherein the device further comprises a means for determining abnormally high cylinder pressure in a given cycle based on the maximum cylinder pressure P_p detected in the cycle. See col. 21, lines 1-8, and col. 22, lines 20-57. Tomisawa discloses an apparatus for control of an internal combustion engine wherein the maximum fluctuation amplitude of the cylinder pressure integral value P_{is} is compared with a predetermined value to
